

SEP's are complex programs that are not easily established without a mentorship and ongoing support. By requiring that SSP's are a Drug and Alcohol entity, AIDS Service Organization or a medical provider, it provides assurance that a baseline understanding of bloodborne pathogen mitigation, HIPAA management and HIV/ hepatitis C awareness are in place. Additional standards must be met, but these core standards are assured with these collective entities. We currently canvas the entire state with services, one agency alone serves 11 of Vermont's counties alone. If an agency wants to be a SSP that does not meet these standards wants to be come one an MOU could be in place between an established SSP with the new entity if they can meet the additional operation standards.

Excluding data from Chittenden Co. over the past year, here is a snapshot of the scope of service that has been provided.
