

Feb 14, 2012

Governor Peter Shumlin
Pavilion Office Building, 5th Floor
109 State Street
Montpelier, VT 05609-0101

Dear Governor Shumlin,

I am writing to show support for the bold plan to move Vermont to 90% renewable energy by 2050. I am also writing because I am not a Vermonter. Rather, I am a supporter of clean energy, and a potential Vermont tourist.

If Vermont pursues this ambitious energy plan, including an increase in wind generation, know that my desire to visit will not diminish. Rather, my family and I would be more likely to visit Vermont and support your efforts towards a greener tomorrow.

Vermont has an incredible opportunity to be a leader in renewable energy. It would be fitting for the Green Mountain State to also be known as the Green Energy State. I hope that my own home state may soon follow your lead.

Thank you, Governor Shumlin for being a leader on this issue. Please take this letter into account when deciding the appropriate role for wind power in Vermont.

Sincerely,

Ms. Katherine Gyllensvard
24 Malden St
Watertown, MA 02472-1827

Dear Governor Shumlin,

I am writing to show support for the bold plan to move Vermont to 90% renewable energy by 2050. I am also writing because I am not a Vermonter. Rather, I am a supporter of clean energy, and a potential Vermont tourist.

If Vermont pursues this ambitious energy plan, including an increase in wind generation, know that my desire to visit will not diminish. Rather, my family and I would be more likely to visit Vermont and support your efforts towards a greener tomorrow.

to
give up.

Also, I know there are "business concerns" in regard to higher rates. The business community (which here doesn't include all the hundreds of progressive businesses in Vermont) has a narrow view. The point is that as a world we have to reduce our dependence of fossil fuels -- the sooner we do it the cheaper it will be. I just have to wonder where they were when we just went through the horrible, devastating, costly weather we have had that is directly related to climate change. Clearly NOT moving fast on renewable energy will cost us much, much more that moving toward a sustainable, stable energy portfolio. Short-term vision, or no vision at all, from the previous administration in both Vermont and nation is one of the reasons we are in this mess. Right now we need vision instead of to be lead by the short-term profits of the business lobby.

So, I urge you to use all your abilities to move the state forward to full use of renewables as quickly as possible. It's the best thing for all Vermonters -- and as you know, Vermont really leads the nation in so many ways, and we need to set an example for the rest of the country.

Thanks for being a great Governor!
John McConnell

Dear Governor,

First, I really want to say to I am so happy to have you as our Governor. In looking at the true crazy politics around the country, I feel like we have a very sane legislative process, and a Governor that really cares. So, thank you.

What I want to comment on today is moving toward a full use of Renewable Energy in Vermont. I understand that Vermont might not meet a goal for Renewables by 2017 and that a Senate Committee finds that good reason to give up. Well, that's no reason to scale back and move away from the goal. That's not the "Vermont Way" that was so displayed during the Irene disaster.

Instead, we need to work even harder to reach the goals. It just strikes me as a real copout that because we might not reach a goal we are just going

90% Renewable Energy by 2025

E-Mail Subj: 90% Renewable Energy by 2025
Subject: 90% Renewable Energy by 2025

Feb 14, 2012

Governor Peter Shumlin
Pavilion Office Building, 5th Floor
109 State Street
Montpelier, VT 05609-0101

Dear Governor Shumlin,

As a Vermonter and Vietnam era Veteran, I am writing to urge you to make meaningful progress towards a climate neutral, renewable energy future for the Green Mountains. Keeping the ownership and jobs here in Vermont will benefit the economy for years to come.

I'm 100% behind the goal to achieve 90% renewable energy by 2025. To make this goal, we need to commit to at least 25 megawatts of new clean energy annually.

Now is the time to rack up some historic victories on the energy front so that future generations of soldiers won't have to fight and die to satisfy our thirst for oil. Let us not cut and run but resolve to make this goal a reality.

"Two men looked from prison bars, one saw mud while the other saw stars." Author unknown.

Thank you in advance for your dedicated leadership on this important issue.

Thank you for your email in support of my administration's Comprehensive Energy Plan. Your email and those of thousands of your fellow Sierra Club members sent a clear message that Vermont must act boldly to ensure a green energy future for the Green Mountain State.

Like you, I am optimistic about Vermont's energy future. For the first time in more than a decade, Vermont has a statewide set of recommendations for a cleaner, better energy future, which we can attain by harnessing the sun, wind, water, forests and fields to produce community-generated renewable power.

Vermont is already on the right path. Currently, 23% of total energy and about 50% of the electricity we use to power our homes and businesses is derived from renewable sources. We are an international leader on energy efficiency, and folks all over the state are beginning to take proactive steps toward increasing efficiency and reducing ever-increasing heating and electric bills. But we need far greater progress.

Together we can do so much more, and I'm looking forward to working collectively to make that happen. The comprehensive Energy Plan sets an ambitious long range goal: to increase the use of renewable energy to 90% of our energy portfolio in all sectors by 2050. I believe that by mid-century, we can increase economic security and independence, create good-paying jobs while safeguarding our environment, expand community involvement and investment, and nearly eliminate our fossil fuel dependence across all energy sectors.

If you are interested in learning more about the Comprehensive Energy Plan, I encourage you to visit <http://vtenergyplan.vermont.gov/>. Thank you for contributing to Vermont's energy future and engaging in our democracy.

Sincerely,
Peter Shumlin

P.S. Over the coming months, I will continue to send you updates about the Comprehensive Energy Plan and other important issues facing our state. If you would like to be removed from my mailing list, please click [Here!](#)
