

As you consider how to vote on Bill H.57, please consider these points.

Yes, everyone should have access to birth control. This is the important point. The decision of not taking chances should be the first and only one people take.

As soon as the egg and sperm connect, the gender, size, hair & eye color, along with several other factors are set. At 10 weeks organs are in place and at 12 weeks, the brain is growing furiously and kidneys start to excrete urine. To me, that is life! That life did not ask to be formed and as with any living thing, it deserves protection outside it's abilities. The woman's rights for just herself end when another life is involved. Saying the baby, though unborn, has no rights is wrong!

Have you checked or thought about how a baby in later stages is aborted?? If an early delivery happened, the baby could live on it's own. It must be killed inside the womb first to abort as if it takes a breath, it is murder. What are you thinking?? The internet has info on stages of development and how abortions happen. Please read some of these.

What about the professionals that strongly believe that abortion is wrong and murder? You would make them perform this act? If the abortions are as popular as you feel, wouldn't there be enough that don't care that could do the deed??

This bill does not reflect how most Vermonters feel and should not be passed or even considered. Some of the women that do get abortions are pressured to do so by the father or family. There are records of some post abortion syndrome also.
