Hi Paul - CWD is regulated as a public water supply, therefore we do not set the standards that we are required to follow. Need the public health experts that set these standards to make a decision on this one. We await this decision, Jim

Hi , Jim

I though the US EPA where experts and I would also consider
USFW experts

considering how many of these treatments they have done around the Great
Lakes and Lake

Champlain with know one getting ill from it. CWD must have the
same agenda

DEC has of sucking up to there rich constituents

Hi Paul - CWD serves 75,000 customers, and the
City of Burlington serves

45,000 customers. We all need to allow the experts in the public health
field to make
these

decisions based on best available science. They are working
through this

process at this time, and we await the final decision, Jim

Hi , Jim

Just want to let you know that I find
it rather ridiculous that you
choose to except standard for drinking water from our corrupt Health
Department and DEC that

decides to change the rules to what
ever suits them instead of following
the EPA guide lines for TFM apparently you have a hidden agenda just like
DEC. Federal

standards for TFM 300ppb State of
Vermont has been 35ppb for 26
years
and now out of know where they decide it should be 3ppb. Give me a break you
guys should

worry
about the real issues like Town of
Shelburne and Burlington dumping
Raw
Sewage in the lake all the time along with all the heavy metals that are in
it. Please do

the
right ting and take the US EPA side
and clear the permits for treatment
of Laplatte river
