Subject: draft Credential of Value definition

Good morning,

During my testimony on Tuesday, Senator Clarkson requested the draft definition for “credential of value” that is being recommended from the SWDB’s Training and Credentialing Workgroup to the Chair of the Board. Could you please share with Senator Clarkson and the rest of the committee?

The draft definition is:

A credential of value is an educational degree, certificate, occupational license, registered apprenticeship or industry-recognized certification verified by a third party with relevant authority or jurisdiction. It is a means of verifying skills and competencies and has value in the current and/or future labor market. Preferably, a credential is stackable, transferable, portable and accessible for participants.
