I think that the new:

(NEW) We ask that by May 10, 2016 you provide the Senate and House Committees on Government Operations with an outline of action steps the subcommittee expects to undertake as part of this process.

is better than:

we request that you report to the senate and house committees by may 2, 2016 concerning your recommendations and time frame and process to be followed to complete the analysis.

To me the latter says action steps and time frame for an analysis not for the goals of the document. But let's try to get May 2, rather than 10 back in.

For the new one, what about:

We ask that by May **2**, 2016 you provide the Senate and House Committees on Government Operations with an outline of action steps **and a time frame** that the subcommittee expects to undertake as part of this process.

Looks weaker am I right? No report till leg leaves and just report on steps not decisions? Are we at least getting R's on committee for this?
