That's a huge bummer--- that's the new utility frame and not one I accept. It's near other load and it's on State land. Nobody expects solar on the State House! DG is DG -- the point is a 21st century grid that doesn't have large power stations regardless of whether a project is next to the load it serves. I'm really bummed by this. Seems like this framing is now the party line and I just don't agree.

There was some concern here about it playing into the whole idea of solar not being located in cities and being distant from load....

We have a solid solar section and lots of good stuff but will keep it in mind.

Are you going to include the idea of noting the State House lights are on solar? I'm hoping so. Think it would play very very well.

Gov asks everyone to look up, cameras capture lawmakers all looking up, snap snap snap, gov announces State House is now solar. Then acknowledge Obi and BGS team, have folks stand-up to be acknowledged who worked on project (Smith MClean and Jobs Corp installers; ImageTek; NSA)

Andrew
